SUMMARY

Senior Software Engineer with deep expertise in **Agents, LLMs, Search, Distributed Systems, and ML Pipelines**. Proven experience building **large-scale, low-latency systems** for production AI, including turn based agents, semantic search, caching, and observability. Strong background in **causal inference, deep learning, big data**, and **cloud-native platforms**. Passionate about system design, applied ML, and developer productivity.

WORK EXPERIENCE

Microsoft Senior Applied Scientist

Core AI & Search (Copilot Search)

May 2022 – Present

- **Architected and deployed turn-based agent systems** serving **10M+ queries daily**, improving answer satisfaction score by **35%** through optimized SLM planning and LLM reasoning pipelines.
- **Built production-scale offline pipelines** generating LLM-based titles, captions, and web answers for **Bing's top 1M queries**.
- **Developed comprehensive embedding model experiments** and **extended HNSW-based retrieval** from existing QnA systems to captions and content components, improving **content coverage** by **40%** and achieving **<30ms P95 retrieval latency** across **150M+ indexed items**.
- **Engineered low-latency online LLM pipelines** for Captions serving long-tail queries by **architecting pre-ranking and post-ranking system design**, triggering LLM generations during pre-ranking with **delayed cache reads** before rendering, maintaining **<200ms page render time** while serving **2M+ daily requests**.
- **Implemented comprehensive observability framework** across 15+ pipeline stages, enabling **real-time performance optimization** and reducing system downtime by **90%**.
- **Architected and deployed end-to-end experimentation infrastructure** from ground up, including **experiment orchestration pipelines**, **interactive Gradio-based experiment interfaces**, **secure production service integrations**, and **network-isolated access controls** with **zero security incidents**.
- **Led prompt engineering initiatives** improving grounded answer accuracy by **25%** through advanced chain-of-thought prompting and web data integration.

Microsoft Senior Software Engineer

Substrate Platform, Office 365

Jan 2021 – May 2022

- Built a **Kubernetes-for-Kubernetes** control plane managing multi-region, multi-tenant, heterogeneous clusters.
- Designed reconciliation systems to maintain **desired vs actual state** across clusters.
- Managed shared infrastructure resources such as **Key Vault, logging sidecars, monitoring, and API-to-API auth**.
- Created a **typesafe spec framework** inspired by Kubernetes but implemented using general-purpose programming languages instead of YAML.
- Designed a **composite inventory abstraction** to persist and query system topology across multiple storage backends.

Amazon SDE II

Consumer Behavior Analytics

Jun 2017 – Dec 2020

- Applied **causal inference** to measure incremental impact of ads on purchases and high-value user actions (Prime signup, Video/Music usage).
- Trained **DNN models** mapping control and treatment variables to user outcomes.
- Built **feature engineering pipelines** to capture correlations between user actions.
- Modeled user-action similarity using **graph representations (Jaccard index)** and applied **spectral analysis**.
- Processed **terabytes of data** using distributed Spark pipelines for feature transformation and inference.
- Implemented **regular model retraining**, weight regularization, and experimented with **sequential models** for campaign effects.

Codensation / Trilogy Innovations SDE II

May 2016 – Jun 2017

- Mined large-scale source-code repositories and built **AST embeddings** for duplicate and similar code detection.
- Developed **auto-refactoring tools** using Eclipse JDT and Clone Digger.
- Built an **organization-wide executive dashboard** tracking developer productivity using statistical analysis.
- Deployed services using **Docker-based orchestration**.

Gozoomo Software Development Engineer

Jul 2015 – May 2016

- Built a **peer-to-peer used-car marketplace** with scalable microservices.
- Auto-generated **typesafe client/server code** using Protobuf.
- Implemented **secure API-to-API authentication**, monitoring, and alerting.
- Developed a **custom chat framework** using Firebase and Angular.

Codenation / Trilogy Innovations Software Development Engineer

Jul 2014 – Jun 2015

- Worked on **enterprise analytics and data warehousing systems** using Microsoft SQL Server.
- Modernized legacy systems with refactoring, unit tests, and mocking.
- Added **CI/CD pipelines** with integration testing.

EDUCATION

M.Tech, Computer Science Engineering

Indian Institute of Technology Madras

2012 – 2014

- Research: *Semi-Supervised Multi-View Multi-Relation Collective Inference using Hypergraphs*
- Published at **IJCAI 2015**

B.Tech, Computer Science Engineering

National Institute of Science and Technology

2006 – 2010

- Built a **scientific mathematics tool** parsing free-form equations and solving ODEs with graph visualization.

PUBLICATIONS

Extended Discriminative Random Walk: A Hypergraph Approach to Multi-View Multi-Relational Transductive Learning

IJCAI 2015

OPEN SOURCE PROJECTS

go-api-boot

<https://github.com/SaiNageswarS/go-api-boot>

Production-grade **Go gRPC microservice framework** with zero-config HTTPS, MongoDB ODM (vector search), Temporal workflows, and cloud abstractions (Azure/GCP).

GraphMind

<https://github.com/SaiNageswarS/GraphMind>

Semantic code intelligence platform that builds **RDF knowledge graphs across repositories**, enabling LLM-powered multi-repo code generation.

agent-boot

<https://github.com/SaiNageswarS/agent-boot>

Multi-tenant **RAG system** integrating Claude with domain-specific knowledge using Go + Python ML pipelines.

GeoSpatialAnalysis

<https://github.com/SaiNageswarS/GeoSpatialAnalysis>

Scalable remote-sensing pipeline using **Temporal** + **GDAL** for satellite imagery (MODIS/FAPAR) processing.

TECHNICAL EXPERTISE

ML Engineering & AI Systems

- **Production LLM Pipelines:** Agent orchestration, prompt engineering, chain-of-thought reasoning, grounding systems
- **Large-Scale Retrieval:** HNSW embeddings, vector search, semantic indexing (150M+ items, <30ms P95 latency)
- **Experimentation Infrastructure:** A/B testing frameworks, Gradio interfaces, secure service integration
- **Causal Inference:** Treatment effect measurement, DNN modeling, feature engineering for terabyte-scale datasets

Distributed Systems & Platform Engineering

- **Container Orchestration:** Kubernetes control planes, multi-tenant cluster management, reconciliation systems
- **High-Performance Systems:** Sub-200ms latency optimization, caching strategies, observability frameworks
- **Microservices:** gRPC, typesafe APIs, service mesh, API-to-API authentication

Programming & Technologies

- **Languages:** Go, Python, Java, C# (production expertise), SQL
- **ML/Data:** PyTorch/TensorFlow, Spark, Temporal, statistical analysis, graph algorithms
- **Cloud & Infrastructure:** Azure, AWS, GCP, Docker, MongoDB, vector databases
